

VMAXUSA is a heavy equipment import company representing the best new technology in emissions free equipment. We are a USA owned and operated company, National Headquarters located in Butte, Montana. VMAXUSA provides customers with new options in heavy electric machinery. forklifts, scissor lifts, track scissor lifts, wheeled front loaders, excavators, mini front loaders, skid steers and more. Check out our new line of 2024 products for your lifting needs.

Renewable Energy Technologies

With the use of the excellent load-sensing steering system and AC controlling renewable energy technologies, the forklift is more energy-saving and the working hour of the battery is extended by 15%.

# **Enclosed protection**

The control levers are placed on the right side of seat. The lower parts of control board, including multi-way valve and cardan joint, are protected by shielding panel from dust damage.

## High quality lead-acid battery

Cost-effective lead-acid battery is adopted, which has the characteristics of high-rate discharge performance, no ignitability, large temperature window, zero pollution, high recycling rate, and long service life.

## Electronic control system

Originally imported INMOTION electronic control is optional for installation. Adopting the up-to-date ACS series AC motor driver, it provides stable drive current, and offers ideal solution for forklift traction, lifting, driving and operation control.

# Reinforced components

The maintenance-free wet disc brake system provides excellent brake performance. The compact structure, small deflection, and dust-proof and water-proof design of the casting steering axle endow the forklift with long service life and working reliability.

# 3-4t

H SERIES BATTERY POWERED COUNTER-BALANCE FORKLIFT

# High efficiency and more energy saving

The special tires for electric forklift with low rolling resistance generate high efficiency and more energy saving effect, while the optimized wheel base design ensures more stable driving and steering performance.

# Flexible steering system

The dynamic load sensing priority steering system ensures faster steering response. The frame is connected to the steering axle in suspension, ensuring excellent vibration damping performance, and more stable driving.

### NOTE:

The vertical axis stands for the load capacity and the horizontal axis stands for the load center. The load center is calculated from the face of the fork. The base point of the standard load is the center of the cube with a load side length of 1000 mm. When the mast leans forward, or non-standard forks are used, or loads exceeds normal width, the load capacity will be reduced. Through the load chart, the bearing capacity of the standard mast at various load centers can be timely understood.
