

TRENCHER

The Blue Diamond® Trencher is extremely durable and has a number of features to make it more productive than our competitors' models. The extended auger carries the dirt farther from the trench to prevent it from falling back in. The self-adjusting crumber brings any residual dirt back to the chain to be removed from the trench for a very clean finish. A selection of chain options is available from dirt to rock and with varying widths. An adjustable foot keeps the trench depth consistent. The Eaton drive motor mounts to an industry-leading planetary drive that provides the high torque to the digging chain. This attachment has been designed and built for the serious contractor who depends on production and reliability. And it is made in USA with American components!
