

EVOLUTION WHEEL™

EWRS-SNOW SERIES

WHY PEOPLE CHOOSE OUR PRODUCT

- ✓ EASY ON-SITE SERVICEABILITY
- ✓ IMPROVED TRACTION
- ✓ LONG WEAR LIFE
- ✓ LOW OPERATING COST/HR

EWRS-SNOW SERIES

BUILT FOR TODAY'S TOUGH JOBSITE DEMANDS

The **EWRS-SNOW skid steer tire** by Evolution Wheel is built tough for winter's worst. This tire is made to power through snow and ice, giving operators the traction they need to get the job done, no matter the conditions.

1. Winter Tread Pattern

Tread Siping: With slits and void space molded into the tread design, the face of the tire has increased pliability to increase traction in the snow.

Studded Design: Embedded studs mean real traction on ice, biting in when needed to maintain traction and performance.

Cold-Ready Rubber Compound

The EWRS-SNOW's rubber is specially formulated for winter. A proprietary rubber compound prevents the rubber from freezing in cold temperatures, so you maintain traction on your machine.

No More Flat Tires

Snow machines are no stranger to service calls. With our airless designs, you can go up and down curbs and work with confidence that you won't break a bead on your rim or get a flat from something hidden in the snow.

The **EWRS-SNOW** is more than just a tire; it's a workhorse for snow removal pros. With increased traction and no flat tires to worry about, it is designed to keep up to the speed of snow removal crews.

Serviceable Segments for Quick and Easy In-Field Repair and a Lower Cost of Operating.

Only Service Tool Required is a Standard Wrench or Socket.

Tread Pattern Designed For Snow and Ice Conditions

High Strength Steel for Maximum Strength and Toughness

Proprietary Cold Weather Rubber Compound

Studded For Traction On Ice

Tire Size	Actual Tire Dimensions			Wearable Tread Depth inch (mm)	Weight lb (kg)	Max Load Rating lb (kg)
	Overall Diameter inch (mm)	Width inch (mm)	Rim Diameter inch (mm)
